hamburg-audio releases the first plugin synthesizer based on advanced-pulsar-synthesis™

NUKLEAR™ comes with unique pulsar oscillators and enriches classic sound synthesis with essential new parameters: by disassociating the note pitch from the waveform length it is possible to create new, previously unheard sounds.

As opposed to classic sound synthesis not the waveform length, but solely its repetition rate is responsible for the resulting pitch.

The length of the individual “pulsaret grains” is controlled and modulated by a separate parameter, the “pulsaret frequency”.

The plugin is available in Audio Unit, VST2 and VST3 format for Windows (32bit & 64bit) and Mac (Intel) for a retail price of 169 Euro.

About hamburg-audio

hamburg-audio was founded in 2004 in Hamburg, Germany.

After relocating to Málaga, Spain in 2011, the development of innovative software instruments has been added to the core business of configuring extremely quiet high-end audio PCs.

NUKLEAR is the first product in a line of plugins currently in development.
